DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 5, 9, 10, 20, and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Sekendur (5852434).

Sekendur discloses a pen FIG. 7 for reading positional data FIGS. 1a-2 from a specially formatted surface FIG. 1. Optical detector 19 is disclosed within the pen. In col. 5, lines 36-39, it is disclosed that during the process of writing, the surface is scanned, data is sent to a computer through a cable for storing and analyzing, and output to a screen. Sekendur further discloses a writing means for writing handwritten characters (Fig. 3).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10, 14-20 and 23-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolff et al (GB 2306669) in view of Sekendur (5852434).

Art Unit: 2675

Wolff discloses a method and system for entering data using an electronic reading device, comprising: an optical detector for detecting a position on a surface (Fig. 7); a wireless transmitter for transmitting data related the detected position (Fig. 5); and a separate electronic device for receiving the transmitted data and for performing a function corresponding to the transmitted data (Fig. 5). Wolff further discloses the device is used for entering text/handwriting information. Wolff further discloses the device can be used as a pointer or a mouse for navigating a display image (page 25, line 21 to page 26, lines 2), which inherently includes a menu. Wolff further discloses using a calendar manipulation form (page 6, lines 6-7), and an email form/phonebook manipulation form (page 6, lines 21 to page 7, line 7).

Wolff differs from these claims in that Wolff does not disclose detecting a predefined address pattern on a specially formatted surface.

Sekendur, in the same inputting field, discloses an optical detector for detecting a position on a specially formatted surface by detecting a predefined address pattern on the specially formatted surface.

It would have been obvious to one ordinary skill in the art to substitute Seeder's optical detector means for Wolff's optical detector means. This would have been obvious because Seeder's optical detector means is a very simple detecting device, and Wolff teaches that many different detecting devices can be used (see Figs. 7-9).

5. Claims 11-13, 21-22 and 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolff in view of Sekendur as applied to claims 1-10, 14-20 and 23-30 above, and further in view of Schiller et al. (6577299).

Wolff further discloses using a facsimile system for receiving and executing the data (page 6, line 21). Wolff does not disclose the using a mobile phone.

Schiller discloses using a mobile phone for receiving, executing and faxing data information (see Fig. 21, col. 12, lines 5-22).

It would have been obvious to one ordinary skill in the art use Schiller's mobile phone in Wolff's facsimile system because of the well-recognized benefits of using a mobile phone over a land line phone.

Conclusion

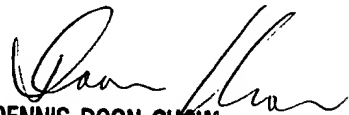

6.. An IDS was filed on 1/18/2002 (paper #6). However, there is no reference in the IDS. Applicant is respectfully request to provide copies of these references.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dennis-Doon Chow whose telephone number is 703-305-4398. The examiner can normally be reached on 8:30-6:00, Alternate Monday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steve Saras can be reached on 703-305-9720. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
